Glenn Quagmire fires spurts of his giggity giggity goo all over Barbara Pewderschmidt as Brian walks into the room mouth agape with his one remaining testicle desdended. Glenn, furious at the sight of his lifelong nemesis, begins to rapid fire STD-filled loads right into brian's mouth. Brian begins to choke on Quagmire's toxic giggity goo and collapses to the floor. Babs, incredibly turned on by this display of dominance, walks on all fours over to brian and queefs out the rest of quagmire's giggity giggity goo into brian's eyes before hammering her fist right onto brian's one remaining testicle and bursting it open like a watermelon hit with buckshot.

You can't microdose by cutting up tabs since the LSD inside may be uneven, you have to put a whole tab into water so that the water absorbs the drug then measure out appropriate shots of Acid Water to microdose comfortably.

I hate microdosing anyway. 200ug trips are good every week or two.

Most trustworthy sellers have stopped moving quantities that are not bulk. So you need to at least buy like $1,800 worth of acid if you want to do business, whereas before you could buy like 10 tabs from the same people for like $25.

So, yeah, you need to either know a big money LSD dealer IRL or you find a rare reseller online that will do small deals.

I've heard that lsd is the safest drug to have shipped through the mail.
In tab form, it is literally a piece of paper. Dogs can't smell it either. Download Tor browser and get some BTC it's that easy.
(This is not an endorsement of illegal activity, I'm merely pointing out how easy it is)

i used to smoke a lot of weed. started getting depressed, getting fat, shit job, no bitches, some health problems. went to a therapist, made sure he's not jewish.

one night i got really fucking high and started jerking off, and i guess i smoked a little too much.

a thought entered my head.

>why would this particular type of porn be erotic to me?

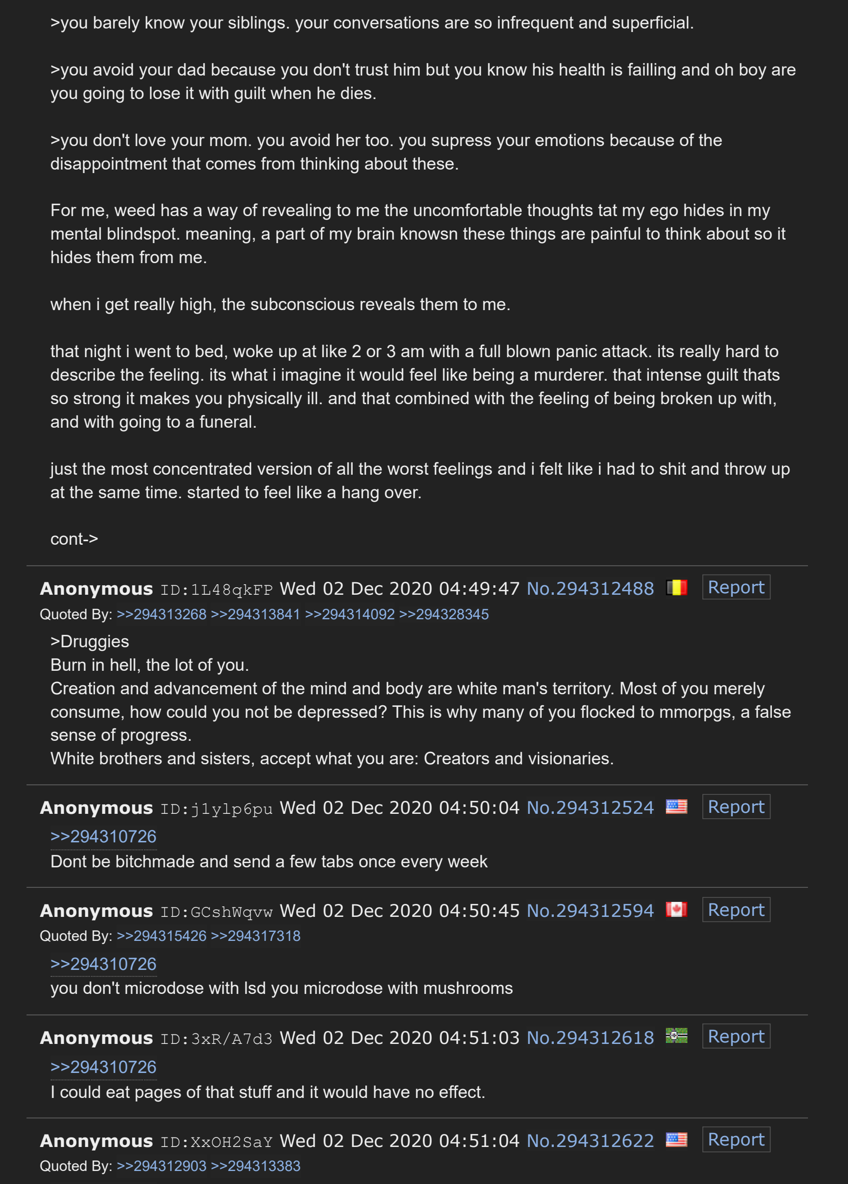
started analyzing it.

its a trap with the ahegao face in bdsm gear getting fucked in the ass by a man.

realized i am imagining that i am the trap. obsessing over the idea of being force fucked, and imaging the prostate orgasm.

immediately sit up, throw the laptop down, start pacing around, panicking. mind moving a million miles an hour.

thoughts popping into my head.



>you barely know your siblings. your conversations are so infrequent and superficial.

>you avoid your dad because you don't trust him but you know his health is failling and oh boy are you going to lose it with guilt when he dies.

>you don't love your mom. you avoid her too. you supress your emotions because of the disappointment that comes from thinking about these.

For me, weed has a way of revealing to me the uncomfortable thoughts tat my ego hides in my mental blindspot. meaning, a part of my brain knowsn these things are painful to think about so it hides them from me.

when i get really high, the subconscious reveals them to me.

that night i went to bed, woke up at like 2 or 3 am with a full blown panic attack. its really hard to describe the feeling. its what i imagine it would feel like being a murderer. that intense guilt thats so strong it makes you physically ill. and that combined with the feeling of being broken up with, and with going to a funeral.

just the most concentrated version of all the worst feelings and i felt like i had to shit and throw up at the same time. started to feel like a hang over.

If shipped through a service where it is illegal to open someone's mail without probable cause, it's nearly impossible to get caught without someone being compromised.
It's scentless and tasteless, and it is within literal paper. Any attempt to verify a random piece of paper as LSD requires opening the mail illegally which then invalidates that as evidence in court.

Is full of shit.
Yes $100 worth of lsd is a lot of lsd for one person but there are countless people online and in person who will sell you this quantity. You could download Tor and go on a dnm right now and confirm what I am saying. If you're not willing to spend $100 on a trip (assuming you don't want to hold on to a large amount of lsd) then you're priorities are all messed up. A video game and a trip to the movies is almost $100 combined. Or you could just store it. It keeps well in a cool dry place (like your fridge).

this repeated 3 nights in a row after i stopped smoking. i'd be dreaming about something normal and then in the dream i'd be exposed as some kind of a fraud and it would wake me up in a panic again.

it went away on it's own, but i told my therapist about it and he said what im feeling isnt guilt, its shame. and there is a distinction.

guilt is a complex emotion.

but even a dog can be shamed.
so i stopped smoking weed 100%.
i stopped jerking for a few weeks, then i limited it no porn then to vanilla straight porn only.

i also started focusing on relationship with family which ive been making progress on with all of them. and i signed up with a bunch of job recruiters to look for something else.

I am not telling you weed will fix your problem. It might. Maybe there are other ways to figure it out. But there is something in your blind spot .

There is something that you are ashamed of that you don't consciously think about because it's very uncomfortable.

>Creation and advancement of the mind and body are white man's territory.

Are you saying that micro dosing LSD and using DMT would not add to the creative abilities of the mind? I don't see a problem with micro dosing.

Having one beer is different that consuming a 24 pack every Saturday. Taking one Tylenol is different that taking the entire bottle.

Should we put to death somebody who consumes a Tylenol? Should we put to death somebody who wishes to experiment with something that may indeed help them (microdosing)?

>high doses of vit D (best as droplets at midday after a workout or meal)
>hanging out with friends
>gf/waifu & family
>less sleep/coffee adoration
>sauna & cold showers
>bringing more order into your life
>writing down milestones right after waking up and smashing them one by one, starting with easy stuff for at least a year

the first three things can be done in combination and there is no excuse if you're low in test, D or hang out too much in front of a monitor.

You MUST socialise with other human beings!

And get early to bed. If you're a gamer, don't play at night. It's far better for a depressed guy to hit the bunk as early as nine or ten o'clock, get out after, five or six hours, straight to the coffee machine, then boot up steam or some online hateshooter. This is win win as sleep deprivation reliably helps, the morning session will help you get out of bed and you can't overplay as your chores begin at some point.

Hansa rightfully scared a lot of people because it was the worst-case/nightmare scenario that everyone was paranoid about becoming reality. Markets now are sketchy unless they intentionally vet their vendors and require all private messages sent on their platform to be encrypted prior to being posted, also all transactions are done via generated addresses rather than using site-based wallets.

TMG forum account is a requirement. That gives you access to all the information and private/one-vendor marketplaces where one-on-one deals are made.

Weed brings all emotions to the front. If you have major demons, you will face them, even with weed.
I've had similar experiences where I got ultra high and bugged out. But if you take control of the situation, understand what the game plan is to fix things, then follow through later, it can be a huge motivator. It is all in your control whether you panic and turn full blown faggot or face the demons.

>Should we put to death
Most people in this thread are pathetic junks.
Letting drugs benefit you in a creativity way only serves to cheat yourself in the long run if you keep relying on them.
I understand the small time uses they could provide but you know as well as I do that that is not how any of the cunts in this thread are using them or would use them. They'd become permanent crutches and necessary tools instead of tools for unlocking growth in a damaged mind. If it can be done without drugs, do it without drugs, and I assure you, it can be done without drugs.

Dont buy from local dealers if you don't know anybody, buy online the quality is high and shipping speeds are comparable to Amazon. LSD is the safest drug to buy online because its sent in envelopes and discrete.
Noob tutorial:
1)install tor
2)go to dark(dot)fail
3)website will have a few marketplace onion links like Versus, WHM and darkmarket. I have experience with those 3, but you can choose any site.
4)site will ask you to register, only username and password, and you're free to browse the listings.

From there its self explanatory, most sites are pretty user friendly and looks like eBay for drugs. You pay with bitcoin and encrypt your address when ordering. If you're buying small quantities <$1000 opsec shouldn't be a big concern.

t. Regular online buyer

Let me just say this. I had a neighbor who grew mushrooms and a band member who had a solid acid connect from her dead head days. I have done both since I was teenager and I'm 36 now. I did full doses, micro doses, super doses and everything in between. I truly feel it just gets in the way of me being connected, it's too disorienting even in low doses. Just meditate and do yoga a shit ton you will get better results in the long term and short term, trust me I won't even touch psychedelics anymore. Don't waste your time.

This
When I take psychedelics I feel like a child i.e. I feel dumb. I guess some people think children are creative but go look at any kids fucking crayon art to see just how creative they really are. Nice work Timmy, a house made of a triangle on top of a square, a stick figure family and a sun with a smiley face.
Real creativity is insightfulness that you've found a way to express effectively. Drugs do not help with this.

I'm a greater fan of LSD and I think you're a degenerate scumbag. Microdosing is a term that shouldn't even be used. It's used to describe a normal, ordinary, therapeutic dose of of a psychotropic. The only reason it's called "microdosing" is because it's being compared to mentally ill schizophrenics and degenerates who take excessive quantities that render that delusional and useless.

You would drink 3-4 beers and then claim to microdosing alcohol because you're not chugging a handle of vodka. The state of psychedelic culture is an embarrassment and degenerates like you are driving that.

>It could shake things up a bit and maybe give you a fresh perspective

OP I run sprints to stay on top of my major, chronic, lifelong depression. You need to literally shake up your brain, not just metaphorically with a vacation or something.

Think of it as a straight chemistry equation. You need to shake up your brain (physically) to get it to produce the neurotransmitters that will control your depression.

And I know that exercising when you're already depressed feels close to impossible sometimes, which is why you should pat yourself on the back and give yourself a whole lot of credit when you start actually moving your body to conquer your depression.

A big reason life is so great and carefree as a kid is because kids run around all day. You need to get back in touch with your physical self, like you did naturally as a kid.

And a good metaphor is to think of yourself as a panther/lion/tiger/antelope. Running is a matter of survival for those animals. YOU are really no different, and YOU should approach exercise as a matter of survival, just like an animal does.

Instead of trying to over-intellectualize your existence through micro-dosing and other stuff, you need to go in the opposite direction, more primal and instinctive.

Over-intellectualizing life and disconnecting from your physical body is the cause of depression, not the cure.

That's part of why black people have such low suicide rates, they don't over-think and they live a primal existence.

Dude, just don't dream of your own special slut princess. This is stupider than girls fantasising about prince charming.
To be perfectly honest, all women (save for fatties of course) look pretty much the same on their backs.
Go for the nice ones. They are as deprived as you. If it doesn't work out, you're level 2 now and shoot higher.
But get laid, it's not as bad as the jew wants you to think. Plenty of lonely fish. Most normal girls just want a nice guy around. Incels are way too much listening to some insta whores and drama that's way beyond their league.

Of course, if you're living in a hellhole like NY then shit, you should probably pray or go to hookers once a month.

Personality can absolutely be leveled just like a physique. And yes, it's FAR more important than looks or money, lemme tell you that!

You don't need Pills or meds to fix your psyche, Microdosing just gives you enough enlightenment to cope with your existence, so I'd say Microdosing is like taking the Blue pill, while enduring the pain and growing over/out of it is the redpill. The truth always hurts, there is no easy solution to personal problems, except you settle with desillusionment and blind yourself again.

Thanks. If I didn't start treating my depression as a life or death problem, I'd already be dead. And my doctor told me to be genuinely proud of myself for dragging my body into regular exercise. And he was right, and that really helped me build a self-esteem upward spiral, and the depression became manageable with the exercise.

And humility is essential. Once you accept that you're no more entitled to a good life than an animal, it helps you take the initiative that an animal does to live another day.

If you want to learn about truth, but are too lazy to read books etc, i can recommend you the Anime Full metal alchemist. The entire series is about enlightenment and Truth.

TL;DR for FMA
Entire FMA universe&its alchemy is basically a Metaphor, a metaphysical world reflecting the real world. Alchemy resembles science, and the protagonist believes he can fix everything with science(Transmuted mother is basically just a trauma resembling loss of his mother/father) The State alchemists are resembling the Thule society back then in FMA, and how the Nazis lured young and naive people like El into joining them.
The entire series deals with topics like Universal truth, power, lust, greed, sloth, all the 7 sins in general, how overcoming them leads to enlightenment.
This series is a piece of art.

It's mostly dependant on your genetic profile.
If you have family members with schizophrenia, then a risk exists.
>>294312351
Assuming he won't experience a bad trip.

To treat depression Ketamine is a much better option. It is a relatively new idea use it that way, and it seems to be more effective than regular anti-depressants - also rapid acting - and a single dose can carry an anti-depressant effect for 2-3 weeks even.
For overall mental stability - unironically - taking lithium might be a good idea.
And to fight apathy, lethargy and low energy - a daily cycle of stimulants can make a difference. (caffeine, modafinil and amphetamines or methylphenidate - but the last two only taken once per week).
>>294310726
Microdosing LSD made me feel sort of strange and anxious, but then again I didn't use the volumetric method - I would cut the blotter instead, so it was definitely a less precise method of measurement.
>>294312160
Never heard of this effect. I heard that there might be a circulatory risk involved though.

Change YOUR FUCKING DIET FIRST COMPLETELY.

DO not NIGGER around with mind altering drugs.

I have spent so much time with people devoid of humanity due to drug use. It is literally russian roulett.

AND DON'T fucking use anti depressants unless you have at least 2 people that know that you are on them and can monitor you. They kill more people than not taking them.

I have been in dark places but in the end working on a healthier body was the ONLY thing that brought about meaningful and permanent positive change.

It never fails to amuse me how the drug threads on /pol/ always end up full of people praising religion. Drugs are a strange but incredibly common path to God. I think part of it is suffering as many people turn to religion when all else has failed. I think it's also something to do with the fact that if you have the will power to turn away from your friends and lifestyle you are so accustomed to, then turning away from secular society that has taught you (or me at least) since childhood to be sceptical of religion is no challenge really.
And maybe drugs just fuck up your brain enough that you'll end up believing anything kek

My running sprints routine gives me a better, longer lasting high than any drug. I ran 7 100 meter sprints yesterday, and that shit makes you walk on clouds for about 3 days.

All that blood flooding into your brain, all those neurotransmitters pumping euphoria into your brain, all that adrenaline making you feel as alive as a tiger who chased down a gazelle.

And with sprints you can be done your entire workout in 20 minutes, and all you need is a parking lot or field.

>(caffeine, modafinil and amphetamines or methylphenidate - but the last two only taken once per week).
I'm sceptical of taking any drugs to fix my problems given how much progress I have made without turning to any psychoactive substance but I still suffer intense lethargy. Gonna play around some

more with my diet and increase exercise first but maybe I will try adding caffeine to the mix to see if that helps.
Still I tend to just think that stimulants come with an equal and opposite reaction (i.e. the come down) that mean they are never worth while.

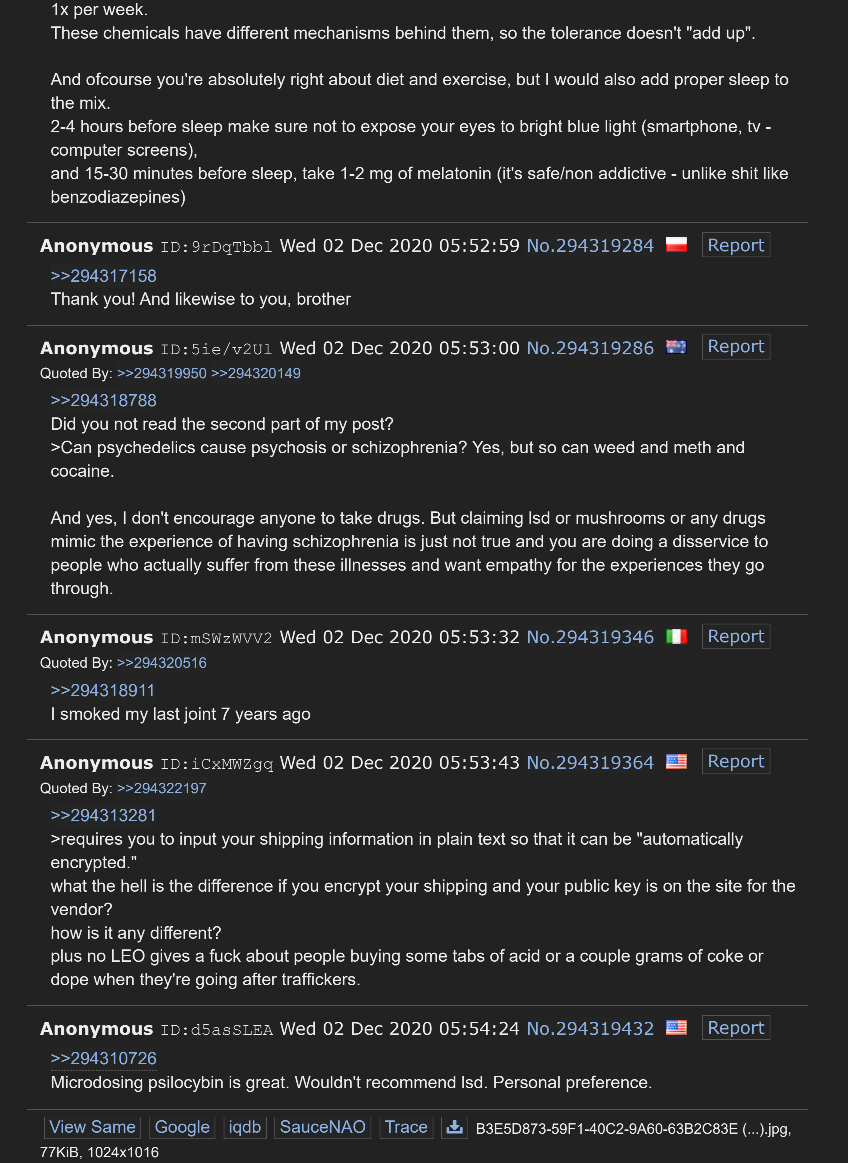
To key to responsible stimulant use is:
Less is more.
And in addition to this - is to keep tolerance levels low.
What works for me is: caffeine 2x per week, modafinil 3x per week and (ideally) methylphenidate -



1x per week.
These chemicals have different mechanisms behind them, so the tolerance doesn't "add up".

And ofcourse you're absolutely right about diet and exercise, but I would also add proper sleep to the mix.
2-4 hours before sleep make sure not to expose your eyes to bright blue light (smartphone, tv - computer screens),
and 15-30 minutes before sleep, take 1-2 mg of melatonin (it's safe/non addictive - unlike shit like benzodiazepines)

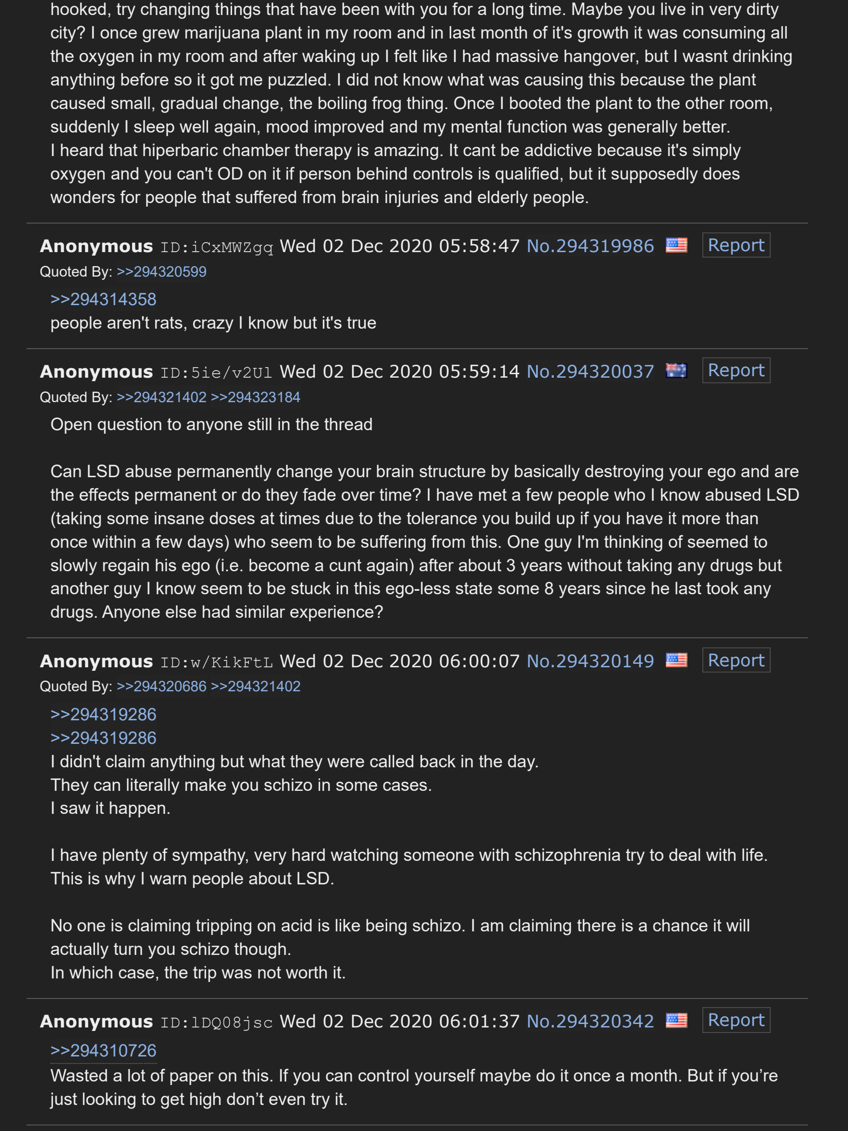
>depressed as fuck
>(((meds))) (((therapy))) not working
I'm fan of reductionism. If something is wrong in your life and you're depressed, you don't add shit that you think might be "positive" but rather subtract that you suspect of being "negative". This way you're much less susceptible to being jewed. Instead of adding benzos or opiods that will get you



hooked, try changing things that have been with you for a long time. Maybe you live in very dirty city? I once grew marijuana plant in my room and in last month of it's growth it was consuming all the oxygen in my room and after waking up I felt like I had massive hangover, but I wasnt drinking anything before so it got me puzzled. I did not know what was causing this because the plant caused small, gradual change, the boiling frog thing. Once I booted the plant to the other room, suddenly I sleep well again, mood improved and my mental function was generally better.
I heard that hiperbaric chamber therapy is amazing. It cant be addictive because it's simply oxygen and you can't OD on it if person behind controls is qualified, but it supposedly does wonders for people that suffered from brain injuries and elderly people.

Open question to anyone still in the thread

Can LSD abuse permanently change your brain structure by basically destroying your ego and are the effects permanent or do they fade over time? I have met a few people who I know abused LSD (taking some insane doses at times due to the tolerance you build up if you have it more than once within a few days) who seem to be suffering from this. One guy I'm thinking of seemed to slowly regain his ego (i.e. become a cunt again) after about 3 years without taking any drugs but another guy I know seem to be stuck in this ego-less state some 8 years since he last took any drugs. Anyone else had similar experience?

I didn't claim anything but what they were called back in the day.
They can literally make you schizo in some cases.
I saw it happen.

I have plenty of sympathy, very hard watching someone with schizophrenia try to deal with life.
This is why I warn people about LSD.

No one is claiming tripping on acid is like being schizo. I am claiming there is a chance it will actually turn you schizo though.
In which case, the trip was not worth it.

>Acid LITERALLY works by “unlocking” your serotonin pathways and making your brain use more of it than it usually does
And?
Creativity is not about having your thoughts go any which way and anywhere. It is about CREATing things. It's right there in the word. To create anything requires the careful exclusion of bad ideas, which all drugs including lsd make a hell of a lot more difficult. You would know this if you have ever taken drugs or tried to do something creative.
You might think you are more creative when you are high but try putting anything on paper and go back to it when you are sober and you will see how wrong you are. At the bare minimum you need your sober mind to sort through all the nonsense you came up with when you were tripping. Real creative minds don't need drugs it's that simple.

microdosing is unscientific.

Like all medicines and poisons, the accurate amount has to do with several individual factors, but mostly with your weight and your gender. Someone who weighs half your weight doesn't need the same amount of drugs you do.

People who try microdosing to avoid prescription refills are in fact hurting themselves because their dosage is so small the drug has no effect. Imagine trying to get drunk on microdoses of wine. Medicine doesn't work that way.

I went to Day for Night, a music festival in Houston back in 2016.You needed a microchip wristband to enter. Once inside, getting drugs wasn't a challenge at all, I had at least 10 people ask me if I wanted "party favors". Inside the compound where all the "art" installations were (which were really just subliminal mkultra art) there was even a drug room for drug dealers to hang out. There were cops patrolling, but they were just there to keep the peace I guess? They never once entered the drug room.
TLDR; I'm convinced I was part of a massive MKULTRA experiment in Texas disguised as a music and art festival.

>disguised as a music and art festival.
Bingo.
In the 60s the "Merry Pranksters" and that ENTIRE SCENE was the CIA.

I was a big partier back in mid and early 2000s. Lots of festivals. Lots of Bassnectar type stuff with heavy tripping.

It's satanic and MK ULTRA and run by psychopaths. I was bigtime VIP at several festivals and met a lot of the people and such.
It's a very fucked up thing and impossible to get to the bottom of.
You are dead on.

Hail brother!

Additional Omega 3s are probably useless if you have decent, non fat free nutrition. There's almost no use for them and let's not forget they increase radicals.
If you're a lowfat bodybuilder eating mostly chicken, rice, tuna and broccoli, then yes, munch them omegas!

As for supps, so much stuff came with lots of buzz but turned out to be hype. BCAAs, protein powder, Vit C, all kinds of oils... The ones who stood the test of time and are highly effective are but a few:
>ZMA (for heavy lifting periods) or just zinc if you've got a cold (take early!) I found out that you can really help smash a cold if you gargle salt
>garlic
>creatin
>specific vitamins if you've got a deficiency, otherwise you could mess with your internal balance sheet
>Vit D

That's it
Curcuma might be the shit but it's too early to say

@women
I'm going to be straight:
All women in your life will fade if you start a family. Which is what you're are meant to have.
Fucking around is just a way to procure children which is still far beneath a real family unit. If she's cool, go for it. Everything will fall into place.

Glory be to Italy!

Anon, please be considerate with both the rosary (1) and praying to Mary (2) - these are the words of Jesus Christ himself:
1) Matthew 6
7But when ye pray, use not vain repetitions, as the heathen do: for they think that they shall be heard for their much speaking. 8Be not ye therefore like unto them: for your Father knoweth what things ye have need of, before ye ask him. 9After this manner therefore pray ye: Our Father which art in heaven, Hallowed be thy name. [...] (Lord's Prayer)
2.) Mark 3
31There came then his brethren and his mother, and, standing without, sent unto him, calling him. 32And the multitude sat about him, and they said unto him, Behold, thy mother and thy brethren without seek for thee. 33And he answered them, saying, Who is my mother, or my brethren? 34And he looked round about on them which sat about him, and said, Behold my mother and my brethren! 35For whosoever shall do the will of God, the same is my brother, and my sister, and mother.
I speak this not to confuse nor deceive, since I've been accused of that before, but from experience - I was raised Catholic and it was led astray and wasn't helped at all. Only once I went to the core itself, i.e. Christianity itself, following Christ and praying the Lord's prayer, have I had tangible results and been born again. Given, I am no expert and may be wrong, but you can't really go wrong with following Jesus' advice either, can you

10gr fresh ~= 1gr dried
A good dose is 2.5g of dried shrooms. Make tea and always lemontek. If you have a bad trip on 2.5g, you're a weak motherfucker.
If you want to go higher, go by .5 grams increments. Don't fuck with that rule. 5 grams is the heroic dose, you can have a very bad trip if you're not prepared for it.
Space trips by a minimum of two weeks to reset tolerance and to keep enjoying them.

Your public key can only encrypt messages, and those encrypted messages can only be decrypted by whoever originally made the key and has it saved on their computer.

Unless the actual hardware the key was created on was acquired, nobody can read those messages besides the ones who generated the keys in the first place. That's why it is best to input only encrypted data onto any website for these situations, so that your details are not even saved for a fraction of a second before encrypting online.

Just to make it clear, there are only two ways someone other than the vendor can see your information:
>their hardware was seized and all their security broken into
>the vendor was a fed all along

There's a real glowie campaign here on 4chan to convince anons that tripping on acid as a lifestyle is cool. A few weeks ago one glowie started a thread declaring that Jerry Garcia would have voted for Trump, and that taking lots of acid is awesome.

OP isn't a glowie, but he attracted a few to this thread.

(Pictured on the right is the Zodiac Killer, who was also Larry Flynt's Hollywood bodyguard. Mentzer also ran a Hollywood hit squad. He was also in on the Son of Sam murders.

Anyway, picture Larry Flynt and the Zodiac Killer hosting a small party with Timothy Leary and FBI agents as close friends and invited guests.

https://donraystories.wordpress.com/2012/02/11/flynt-in-flashback-sf-bay-guardian-jan-15-1997/

Try watching that shit live with a head full of acid surrounded by a mob of 10,000 "progressives". It was some fear and loathing shit, it was hell. I don't trip anymore, I have no desire to at this point. These drugs (shrooms,LSD,MDMA) are all tools with great purpose, but they are being abused and used for a high. Beware of unearned wisdom.

Well, I did not make this up.
There's lots of studies regarding sleep deprevation. It works and it's been known for at least a hundred years.
And it does not have to be extreme at all. We're talking a couple of hours a week.

Google it and shut up. Then ask yourself why everybody takes drugs when some remedies cost literally nothing (arguably the cost is negative as you could work more and gain money).

Diet is more than calories. Changing it fundamentally for a while can alter mood or change it permanently.

People who live tougher lives with "worse" non western diets tend to have less depression. However we have seen this increase as western diets have infiltrated their cultures.

Going on a paleo, keto or geen/vegan/raw diet for a couple of weeks should have the quickest results as your brain shifts from it's normal to the new normal.

LSD will not grant you IQ, it will however literally activate your brain in a way that is normally impossible. It forces your mind to use itself more than you are used to be a factor of like 20 while you encounter hallucinogenic effects.

That's the raw science behind it, and DMT is the same except so powerful you feel as if you leave your own body for a period of time. You don't actually cross dimensions or anything, it's just that your brain is running at 1488 miles per hour while generating images/sounds for you as your altered state of mind perceives you as no longer being attached to your earthly body.

The Catholic Church is attacked because it is the true religion. Jesus Christ is attacked because he is the true God.
Vatican 2 and the "popes" since Pious XII died are illegitimate according to Catholic law.
We are in the prophecized great apostasy of the end times. JP2 was the antichrist and the abomination of desolation is upon us.
The answer to heresy isn't more heresy.
The answer is the true traditional Catholic faith. Whole an unchanged. Complete reverence for our Lord Jesus Christ, his church and our blessed mother.

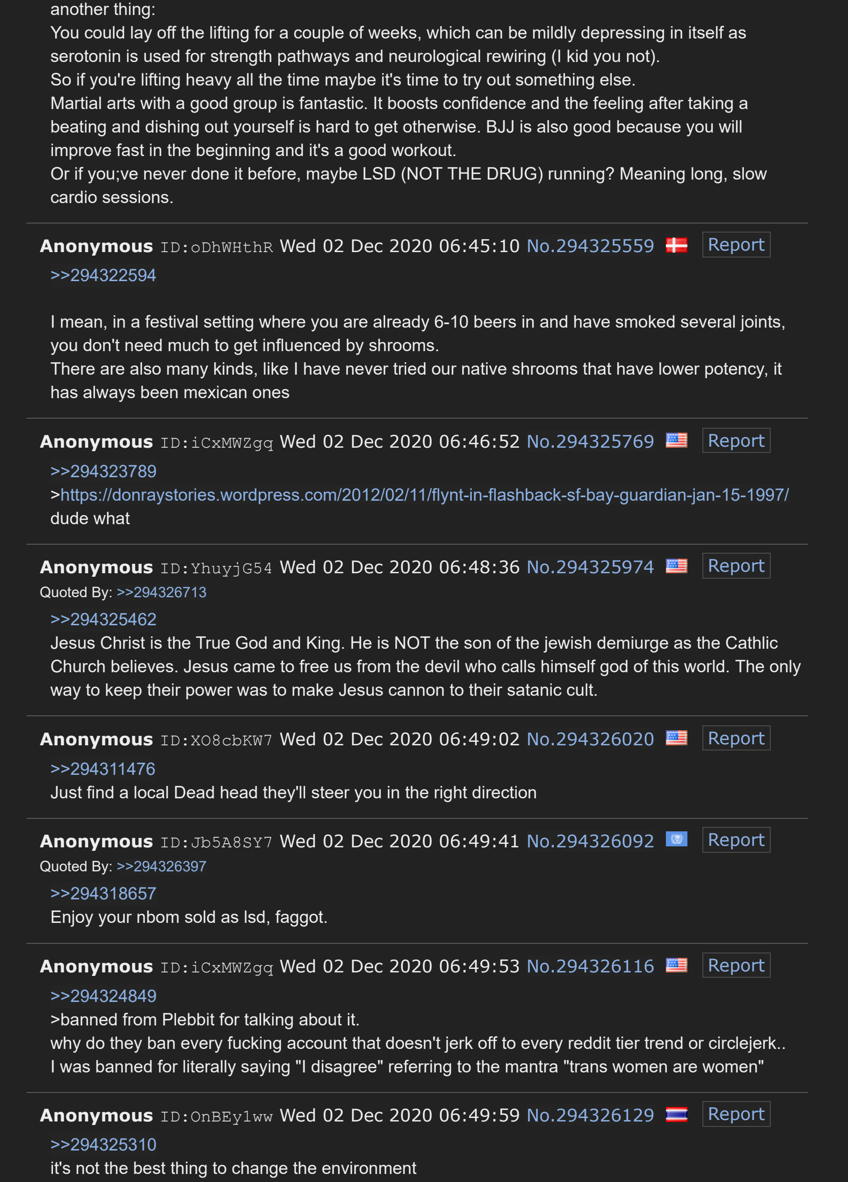
sorry. the flags are vaguely similar...

I hope you can fight off the spectre of depression. Try out some of the other techniques.



another thing:
You could lay off the lifting for a couple of weeks, which can be mildly depressing in itself as serotonin is used for strength pathways and neurological rewiring (I kid you not).
So if you're lifting heavy all the time maybe it's time to try out something else.
Martial arts with a good group is fantastic. It boosts confidence and the feeling after taking a beating and dishing out yourself is hard to get otherwise. BJJ is also good because you will improve fast in the beginning and it's a good workout.
Or if you;ve never done it before, maybe LSD (NOT THE DRUG) running? Meaning long, slow cardio sessions.

I think it has more to do with having an intense experience.
It's known that genetic predisposition influences, whether someone will develop schizophrenia.
And if you have the genes, that put you in the high risk group - what often "activates" the condition - is being exposed to a traumatic/intense life event, for example losing a parent, or becoming a victim of abuse, or surviving a car crash or something similar.
A psychodelic trip can sometimes be similar in it's intensity. And if the person being traumatized is young - the risk is even higher.
The older you are, the better developed is your frontal lobe - so it becomes easier for you to deal with shock and to adapt. Schizophrenia usually appears in people, aged between 16-25
(the frontal lobe can grow up to the age of 25) and after the age of 30, the risk is very very low, because the nervous system is fully grown and stable, by that age.

Look at the main topics (((they))) post. Hate threads, gun-making/3d printing threads, gore threads, weed/LSD/DMT threads, trump will save America, and Q threads are all the same.

Any threads or discussion about organizing or launching red pill operations get shut down and archived. They want anons to be hateful, drugged, deranged and making illegal weapons. They don't want anyone to peacefully organize or even take any action in a normal non sperg manner. They don't want any militias or right-wing groups to form. Gloweis either form groups themselves to jail anyone joining or kill anyone they deem dangerous.

The hero to save the west is a man with long time connections to the elite, a man who has married

all his children to jews. Let's not forget how every (((right-wing))) persona always ends up acting like a clown.
Alex Jones is always acting like a retard while using drugs and talking about drugs and some poison in the well shit.

It heavily depends on your psychological constitution.
A friend of mine was a loser, depressive, started studies and quit again. He tried different therapies never worked. Lost apartment and girlfriend. Then he started microdosing and went to a school

learning a skill he can use in a job. Took him two years and now he's earning 80k a year and saving most of his salary because he needs very little to work.
I tried the same process when having a burnout, felt depressive and couldn't go on with my job. It didn't help me at all I felt no change what so every.
Conclusion: It must come from you and your psychological constitution must be able to do the changes, then a drug MAY help you, but there is no magical drug that just blows all your problems and obstacles away and makes you a new human.
